

DL4J Deep Learning for Java

[Home](#) [Quickstart](#) [Spark](#) [Documentation](#) [Word2Vec](#) [Javadoc](#) [About](#)

What is Deeplearning4j?

Deeplearning4j is the first commercial-grade, open-source, distributed deep-learning library written for Java and Scala. Integrated with Hadoop and [Spark](#), DL4J is designed to be used in business environments, rather than as a research tool. [Skymin](#)d is its commercial support arm.

Deeplearning4j aims to be cutting-edge plug and play, more convention than configuration, which allows for fast prototyping for non-researchers. DL4J is customizable at scale. Released under the Apache 2.0 license, all derivatives of DL4J belong to their authors.

By following the [instructions on our Quick Start page](#), you can run your first examples of trained neural nets in minutes.
